Aurora SFC Systems, Inc. announces the launch of the Aurora SFC Fusion™ A5 Evolution.

Aurora SFC Systems has released the new SFC Fusion™ A5 Evolution. Building on the success of the Aurora SFC Fusion A5, the Evolution features a combination of optimized pumping technology with an ultra-low noise back-pressure regulator resulting in a noise specification of 0.05 mAU or less, far exceeding competitive offerings. The extremely low baseline noise, high UV sensitivity, and robustness of the new SFC Evolution opens up application areas including enantiomeric excess and trace level analyses.

Used in combination with an Agilent 1100/1200 HPLC system, the SFC Fusion A5 Evolution module features short analysis with decreased equilibration times and superior diffusion characteristics. This second generation module easily separates chiral compounds, and moves SFC smoothly into routine laboratory analyses with enhanced features for full qualification in a GLP/GMP environment. The Aurora SFC Fusion A5 Evolution provides high throughput, low cost analyses while maintaining a greener and leaner approach to normal phase chromatography.

Aurora SFC systems, Inc. provides upgrade kits which allow for full conversion of an Agilent 1100/1200 series HPLC to a full analytical SFC system. With cost containment the focus of many companies, conversion reduces the overall cost of entry while providing an SFC system that delivers unparalleled performance. In addition, existing systems can be upgraded to the Evolution platform, allowing for improved reliability.

About Aurora SFC Systems Inc.

Aurora SFC Systems, Inc. is the industry leader in the development and manufacture of SFC products that provide a reliable, proven cost effective alternative to HPLC across a wide range of industries. Since 2007 Aurora has been providing customers with innovative SFC products, service, and support.
